1. Safety Precautions and Warnings

To prevent personal injury or damage to vehicles and/or the scan tool, read this instruction manual first and observe the following safety precautions at a minimum whenever working on a vehicle:

- Always perform automotive testing in a safe environment.
- Wear safety eye protection that meets ANSI standards.
- Keep clothing, hair, hands, tools, test equipment, etc. away from all moving or hot engine parts.
- Operate the vehicle in a well ventilated work area: Exhaust gases are poisonous.
- Put blocks in front of the drive wheels and never leave the vehicle unattended while running tests.
- Use extreme caution when working around the ignition coil, distributor cap, ignition wires and spark plugs. These components create hazardous voltages when the engine is running.
- Put the transmission in PARK (for automatic transmission) or NEUTRAL (for manual transmission) and make sure the parking brake is engaged.
- Keep a fire extinguisher suitable for gasoline/chemical/electrical fires nearby.
- Don't connect or disconnect any test equipment while the ignition is on or the engine is running.
- Refer to the user's manual for the vehicle being serviced and adhere to all diagnostic procedures and precautions. Otherwise personal injury or unneeded repairs may result.
- Keep the scan tool dry, clean, free from oil/water or grease. Use a mild detergent on a clean cloth to clean the outside of the scan tool when necessary.

2. General Information

2.1 On-Board Diagnostics (OBD) II

The first generation of On-Board Diagnostics (called OBD I) was developed by the California Air Resources Board (ARB) and implemented in 1988 to monitor some of the emission control components on vehicles. As technology evolved and the desire to improve the On-Board Diagnostic system increased, a new generation of On-Board Diagnostic system was developed. This second generation of On-Board Diagnostic regulations is called "OBD II".

The OBD II system is designed to monitor emission control systems and key engine components by performing either continuous or periodic tests of specific components and vehicle conditions. When a problem is detected, the OBD II system turns on a warning light (MIL) on the vehicle instrument panel to alert the driver typically by the phrase of "Check Engine" or "Service Engine Soon". The system will also store important information about the detected malfunction so that a technician can accurately find and fix the problem. Here below follow three pieces of such valuable information:

- 1) **Whether the Malfunction Indicator Light (MIL) is commanded 'on' or 'off';**
- 2) **Which, if any, Diagnostic Trouble Codes (DTCs) are stored;**
- 3) **Readiness Monitor status.**

2.2 Diagnostic Trouble Codes (DTCs)

OBD II Diagnostic Trouble Codes are codes that are stored by the on-board computer diagnostic system in response to a problem found in the vehicle. These codes identify a particular problem area and are intended to provide you with a guide as to where a fault might be occurring within a vehicle. OBD II Diagnostic Trouble Codes consists of a five-digit alphanumeric code. The first character, a letter, identifies which control system sets the code. The other four characters, all numbers, provide additional information on where the DTC originated and the operating conditions that caused it to set. Here below is an example to illustrate the structure of the digits:

2.3 Location of the Data Link Connector (DLC)

The DLC (Data Link Connector or Diagnostic Link Connector) is the standardized 16-cavity connector where diagnostic scan tools interface with the vehicle's on-board computer. The DLC is usually located 12 inches from the center of the instrument panel (dash), under or around the driver's side for most vehicles. If Data Link Connector is not located under the dashboard, a label should be there telling the location. For some Asian and European vehicles, the DLC is located behind the ashtray and the ashtray must be removed to access the connector. If the DLC cannot be found, refer to the vehicle's service manual for the location.

2.4 OBD II Readiness Monitors

An important part of a vehicle's OBD II system is the Readiness Monitors, which are indicators used to find out if all of the emissions components have been evaluated by the OBD II system. They are running periodic tests on specific systems and components to ensure that they are performing within the allowable limits.

Currently, there are eleven OBD II Readiness Monitors (or I/M Monitors) defined by the U.S. Environmental Protection Agency (EPA). Not all monitors are supported by all vehicles and the exact number of monitors in any vehicle depends on the motor vehicle manufacturer's emissions control strategy.

Continuous Monitors -- Some of the vehicle components or systems are continuously tested by the vehicle's OBD II system, while others are tested only under specific vehicle operating conditions. The continuously monitored components listed below are always ready:

- 1) **Misfire**
- 2) **Fuel System**
- 3) **Comprehensive Components (CCM)**

Once the vehicle is running, the OBD II system is continuously checking the above components, monitoring key engine sensors, watching for engine misfire, and monitoring fuel demands.

Non-Continuous Monitors -- Unlike the continuous monitors, many emissions and engine system components require the vehicle to be operated under specific conditions before the monitor is ready. These monitors are termed non-continuous monitors. For different ignition

type engines, the available monitors are different too.

The following monitors are to be used for spark ignition engines only:

- 1) **EGR System**
- 2) **O2 Sensors**
- 3) **Catalyst**
- 4) **Evaporative System**
- 5) **O2 Sensor Heater**
- 6) **Secondary air**
- 7) **Heated Catalyst**

The following monitors are to be used for compression ignition engines only:

- 1) **EGR System**
- 2) **NMHC Catalyst**
- 3) **NOx after treatment**
- 4) **Boost pressure system**
- 5) **Exhaust gas sensor**
- 6) **PM filter**

2.5 OBD II Monitor Readiness Status

OBD II systems must indicate whether or not the vehicle PCM's monitor system has completed testing on each component. Components that have been tested will be reported as "Ready", or "Complete", meaning they have been tested by the OBD II system. The purpose of recording readiness status is to allow inspectors to determine if the vehicle's OBD II system has tested all the components and/or systems.

The power-train control module (PCM) sets a monitor to "Ready" or "Complete" after an appropriate drive cycle has been performed. The drive cycle that enables a monitor and sets readiness codes to "Ready" varies for each individual monitor. Once a monitor is set as "Ready" or "Complete", it will remain in this state. A number of factors,

including erasing of diagnostic trouble codes (DTCs) with a scan tool or a disconnected battery, can result in Readiness Monitors being set to “Not Ready”. Since the three continuous monitors are constantly evaluating, they will be reported as “Ready” all of the time. If testing of a particular supported non-continuous monitor has not been completed, the monitor status will be reported as “Not Complete” or “Not Ready.”

In order for the OBD monitor system to become ready, the vehicle should be driven under a variety of normal operating conditions. These operating conditions may include a mix of highway driving and stop and go, city type driving, and at least one overnight-off period. For specific information on getting your vehicle’s OBD monitor system ready, please consult your vehicle Owner’s Manual.

2.6 OBD II Definitions

Power-train Control Module (PCM) -- OBD II terminology for the on-board computer that controls engine and drive train.

Malfunction Indicator Light (MIL) -- Malfunction Indicator Light (Service Engine Soon, Check Engine) is a term used for the light on the instrument panel. It is to alert the driver and/or the repair technician that there is a problem with one or more of vehicle's systems and may cause emissions to exceed federal standards. If the MIL illuminates with a steady light, it indicates that a problem has been detected and the vehicle should be serviced as soon as possible. Under certain conditions, the dashboard light will blink or flash. This indicates a severe problem, and flashing is intended to discourage vehicle operation. The vehicle onboard diagnostic system cannot turn the MIL off until necessary repairs are completed or the condition no longer exists.

DTC -- Diagnostic Trouble Codes (DTCs) identify which section of the emission control system has malfunctioned.

Enabling Criteria -- Also termed Enabling Conditions. They are the vehicle-specific events or conditions that must occur within the engine before the various monitors will set, or run. Some monitors require the vehicle to follow a prescribed “drive cycle” routine as part of the

enabling criteria. Drive cycles vary among vehicles and for each monitor in any particular vehicle.

OBD II Drive Cycle -- A specific mode of vehicle operation that provides conditions required to set all the readiness monitors applicable to the vehicle to the “ready” condition. The purpose of completing an OBD II drive cycle is to force the vehicle to run its onboard diagnostics. Some form of a drive cycle needs to be performed after DTCs have been erased from the PCM’s memory or after the battery has been disconnected. Running through a vehicle’s complete drive cycle will “set” the readiness monitors so that future faults can be detected. Drive cycles vary depending on the vehicle and the monitor that needs to be reset. For vehicle specific drive cycle, consult the vehicle Owner’s Manual.

Freeze Frame Data -- When an emissions related fault occurs, the OBD II system not only sets a code but also records a snapshot of the vehicle operating parameters to help in identifying the problem. This set of values is referred to as Freeze Frame Data and may include important engine parameters such as engine RPM, vehicle speed, air flow, engine load, fuel pressure, fuel trim value, engine coolant temperature, ignition timing advance, or closed loop status.

2.7 OBD II Modes of Operation

Here is a basic introduction to the OBD II communication protocol.

Mode byte: The first byte in the stream is the mode number. There are 10 modes for diagnostic requests. The first byte in the response data bytes is this same number plus 64. For example, a mode 1 request would have the first data byte = 1, and the response would have the first data byte = 65. Here is a brief description of the modes:

Mode \$01 – Identifies the Power-train information and shows the current data available to the scan tool. This data includes: DTC set, status of on-board tests, and vehicle data such as engine RPM, temperatures, ignition advance, speed, air flow rates, and closed loop status for fuel system.

Mode \$02 – Displays Freeze Frame data. Same data as in mode 1,

but it was captured and stored when a malfunction occurred and a DTC was set. Some of the PIDs for mode one are not implemented in this mode.

Mode \$03 – Displays the type of power-train or emission related DTCs stored by a 5 digit code identifying the faults. There may be more than one response message if there are more trouble codes than will fit in the data bytes of the response message, or if there are more than one ECU computer responding.

Mode \$04 – Used to clear DTCs and Freeze Frame data. This clears all diagnostic trouble codes that may be set including freeze frame data and readiness monitors.

Mode \$05 – Oxygen Sensor Test Results. This mode displays the oxygen sensor monitor screen and the test results gathered about the oxygen sensor.

There are ten terms available for diagnostics:

1. \$01 Rich-to-Lean O2 sensor threshold voltage.
2. \$02 Lean-to-Rich O2 sensor threshold voltage.
3. \$03 Low sensor voltage threshold for switch time measurement.
4. \$04 High sensor voltage threshold for switch time measurement.
5. \$05 Rich-to-Lean switch time in ms.
6. \$06 Lean-to-Rich switch time in ms.
7. \$07 Minimum voltage for test.
8. \$08 Maximum voltage for test.
9. \$09 Time between voltage transitions in ms.

Mode \$06 – Non-continuously Monitored Systems test results. There are typically a minimum value, a maximum value, and a current value for each non-continuous monitor. This data is optional, and it is defined by a given vehicle maker if it's used.

Mode \$07 – Request for DTCs (pending) from Continuously Monitored Systems after a single driving cycle has been performed to determine if repair has fixed a problem. This is used by service technicians to verify whether repair was performed

properly after diagnostic trouble codes are cleared.

Mode \$08 – This special Control Mode requests control of the on-board system, test, or component bi-directionally (where applicable). The mode is manufacturer specific.

Mode \$09 – Reports vehicle information. This information includes vehicle VIN number and calibration information stored in the vehicle ECUs.

Mode \$0A – Request Emission-Related Diagnostic Trouble Codes with Permanent Status. This mode is required for all emissions-related DTCs. The presence of permanent DTCs at an inspection without the MIL illuminated is an indication that a proper repair was not verified by the on-board monitoring system.

3. Using the Scan Tool

3.1 Tool Description

- 1) **OBD II CONNECTOR** – Connects the scan tool to the vehicle’s DLC.
- 2) **LCD DISPLAY** – Displays menus and test results.
- 3)  **FUNCTION BUTTONS** – Corresponds with “buttons” on screen for executing commands.

- 4)  **ESC BUTTON** – Cancels a selection (or action) from a menu or returns to the previous screen.
- 5)  **LEFT SCROLL BUTTON** – When scrolling through a screen of data or text moves to previous character and views additional information on the previous screen, if recorded data content covers more than one screen. It is also used to view previous trouble code when viewing DTCs.
- 6)  **HELP BUTTON** – Provides help information and Code Breaker function.
- 7)  **DOWN SCROLL BUTTON** – Moves down through menu and submenu items in menu mode. When more than one screen of data is retrieved, moves down through the current screen to the next screen for additional data. When looking up DTC, it is used to change value of the selected character.
- 8)  **RIGHT SCROLL BUTTON** – When scrolling through a screen of data or text moves to previous character and views additional information on the previous screen, if recorded data content covers more than one screen. It is also used to view next trouble code when viewing DTCs.
- 9)  **OK BUTTON** – Confirms a selection (or action) from a menu.
- 10)  **UP SCROLL BUTTON** – Moves up through menu and submenu items in menu mode. When more than one screen of data is retrieved, moves up through the current screen to the previous screens for additional data. When looking up DTC, it is used to change value of the selected character.
- 11) **USB CONNECTOR** – Connects the scan tool to the PC for printing.
- 12) **TF CARD SLOT** – Holds the TF card.

3.2 Specifications

- 1) Display: TFT color display (320 x 240 dpi)
 - 2) Operating Temperature: 0 to 60 °C (32 to 140 F °)
 - 3) Storage Temperature: -20 to 70 °C (-4 to 158 F °)
 - 4) External Power: 8.0 to 18.0 V power provided via vehicle battery
 - 5) Dimensions:
- | 6) | Length | Width | Height |
|----|---|------------------|-----------------|
| 7) | 199 mm (7.83") | 104.5 mm (4.11") | 37.5 mm (1.48") |
| 8) | Weight: 0.28kg(without wire) 0.484kg(with wire) | | |

3.3 Accessories Included

- 1) **User's Manual** -- Instructions on the tool's operations.
- 2) **CD** -- Includes user's manual, AutoLink update software, and etc.
- 3) **OBDII cable** -- Provides power to the scan tool and communicates between the tool and vehicle.
- 4) **USB cable** -- Communicates between the tool and PC and upload the retrieved data for printing.
- 5) **Protective Nylon Case** -- A nylon case to store the tool when not in use.
- 6) **TF card** -- Used to store data and to upgrade the scan tool

3.4 Keyboard

No solvents such as alcohol are allowed to clean the keypad or display. Use a mild nonabrasive detergent and a soft cotton cloth. Do not soak the keypad as the keypad is not waterproof.

3.5 Power

The scan tool is powered via the vehicle Data Link Connector (DLC).

Just follow the steps below to turn on the scan tool:

- 1) Connect the OBD II Cable to the scan tool.
- 2) Find DLC on the vehicle.
 - *A plastic DLC cover may be found for some vehicles and you need to remove it before plugging the OBDII cable.*
- 3) Plug the OBD II cable to the vehicle's DLC.
- 4) Power up the scan tool, and wait for the **Main Screen** to appear. (Figure 3.1)

Figure 3.1

3.6 System Setup

The System Setup function allows you to adjust default settings and view the information about the scan tool.

- 1) **Language:** Selects the desired language.
 - 2) **Unit of measure:** Sets the unit of measure to English or Metric.
 - 3) **Beep Set:** Turns on/off beep.
 - 4) **Key Test:** Checks if the keyboard is working properly.
 - 5) **LCD Test:** Checks if the LCD display is in good condition.
 - 6) **About:** Provides information of the scan tool.
- *Settings will remain until change to the existing settings is made.*

To enter the Setup menu

On **Main Screen** use the **LEFT/RIGHT** scroll button to select **Setup**, and press the **OK** button. Following the instructions to do adjustments and settings could make your diagnosis more convenient and easy.

Figure 3.2

Language Setup

- *English is the default language.*
- 1) On **System Setup** screen, use the **UP/DOWN** scroll button and **LEFT/RIGHT** scroll button to select **Language**, and press the **OK** button.
 - 2) Use the **UP/DOWN** scroll button to select the desired language and press the **OK** button to save your selection and return to the previous screen.

Figure 3.3

Note: The current version of AL609 scan tool supports only the English language, and there will be more languages to come with new updates released.

Unit of Measure

- *Metric is the default measurement unit.*
- 1) On **System Setup** screen, use the **UP/DOWN** scroll button and **LEFT/RIGHT** scroll button to select **Unit** and press the **OK** button.
 - 2) Use the **LEFT/RIGHT** scroll button to select the desired unit of measurement.

Figure 3.4

- 3) Press the **OK** button to save your selection and return to the previous menu, or press the **ESC** button to exit without saving.

Beep Set

- *The default setting is Beep On.*
- 1) On **System Setup** screen, use the **UP/DOWN** scroll button and **LEFT/RIGHT** scroll button to select **Beep**, and press the **OK** button.
 - 2) On **Beep Set** menu, use the **LEFT/RIGHT** scroll button to select **ON** or **OFF** to turn on/off the beep. (Figure 3.5)

Figure 3.5

- 3) Press the **OK** button to save your selection and return to the previous menu, or press the **ESC** button to exit without saving.

Key Test

The Key Test function checks if the keyboard is working properly.

- 1) On **System Setup** screen, use the **UP/DOWN** scroll button and **LEFT/RIGHT** scroll button to select **Key Test**, and press the **OK** button.
- 2) Press any key to start test. When you press a key, the edge around the corresponding key on the screen will turn red; otherwise, the key is not functioning properly.

Figure 3.6

- 3) Double press the **ESC** button to return to the previous menu.

LCD Test

The **LCD Test** function checks if the LCD display is working normally.

- 1) On **System Setup** screen, use the **UP/DOWN** scroll button and **LEFT/RIGHT** scroll button to select **LCD Test**, and press the **OK** button.
- 2) Check if there is any missing spot in the red, green, blue, black and white LCD displays.
- 3) When the test is completed, press the **ESC** button to exit.

About

The **About** function allows viewing of the important information, such as serial number and software version number of the scan tool.

- 1) On **System Setup** screen, use the **UP/DOWN** scroll button and **LEFT/RIGHT** scroll button to select **About**. Press the **OK** button, and wait for the **About** screen to appear.
- 2) View the tool's information on the screen. (Figure 3.7) Press the **ESC** button to exit.

Figure 3.7

3.7 Vehicle Coverage

The AutoLink® AL609 OBDII/EOBD Scanner is specially designed to work with all OBD II compliant vehicles, including those equipped with next-generation protocols -- Control Area Network (CAN). It is required by EPA that all 1996 and newer vehicles (cars and light trucks) sold in the United States must be OBD II compliant and this includes all the US Domestic, Asian and European vehicles.

A small number of 1994 and 1995 model year gasoline vehicles are OBD II compliant. To verify if a 1994 or 1995 vehicle is OBD II compliant, check the Vehicle Emissions Control Information (VECI) Label which is located under the hood or by the radiator of most vehicles. If the vehicle is OBD II compliant, the label will designate "OBD II Certified". Additionally, Government regulations mandate that all OBD II compliant vehicles must have a common sixteen-pin Data Link Connector (DLC).

For your vehicle to be OBD II compliant it must have a 16-pin DLC under the dash and the Vehicle Emission Control Information Label must state that the vehicle is OBD II compliant.

In addition to OBD II diagnosis, the AL609 scan tool also supports the ABS diagnostic function, dealing with more than 20 US, Asian and European vehicles, including GM, Ford, Chrysler, Volvo, VW, BMW, Benz, Smart, Sprinter, Toyota, Honda, Nissan, Hyundai, Kia, Subaru, Mitsubishi, Peugeot, Citroen, (Peugeot and Citroen are only for AL609EU) Fiat, Renault, Landrover, Jaguar.

More vehicle supports will come out with new updates released.

3.8 Product Troubleshooting

This part describes problems that you may encounter when using the scan tool.

Vehicle Linking Error

A communication error occurs if the scan tool fails to communicate with the vehicle's Engine Control Unit (ECU). In this case you need to do the followings to check up:

- ✓ Verify whether or not the ignition is ON.
- ✓ Check if the scan tool's OBD II connector is securely connected to the vehicle's DLC.
- ✓ Verify if the vehicle is OBDII compliant.
- ✓ Turn the ignition off and wait for about 10 seconds. Turn the ignition back to on and continue the testing.
- ✓ Verify if the control module is defective.

Operating Error

If the scan tool freezes, then an exception occurs or the vehicle's ECU is too slow to respond the requests. In this case you need to do the followings to reset the tool:

- ✓ Reset the scan tool.
- ✓ Turn the ignition off and wait for about 10 seconds. Turn the ignition back to on and continue the testing.

Scan tool doesn't power up

If the scan tool won't power up or operates incorrectly in any other way, you need to do the followings to check up:

- ✓ Check if the scan tool's OBD II connector is securely connected to the vehicle's DLC.
- ✓ Check if the DLC pins are bent or broken.
- ✓ Clean the DLC pins if necessary.
- ✓ Check the vehicle battery to make sure it is in good condition with at least 8.0 volts.

4. ABS Diagnosis

ABS -“Anti-lock Braking System” in most vehicles is made up of an electronic hydraulic pump of two, three or most commonly four Wheel Speed Sensors (WSS), a G-force sensor, a Vehicle Speed Sensor and an ABS Control Module (EBCM). The EBCM is constantly monitoring the WSS, the Vehicle Speed Sensor, and the G-sensor.

Diagnosing an ABS problem should always start with a visual inspection of all brake components, then you will need to retrieve ABS DTCs to tell you where the problem is.

The ABS diagnostic function is used to retrieve and clear codes from the vehicle’s Anti-lock Braking System. It also provides the definition of each code to help diagnosing problem areas within the system that may cause the Malfunction Indicator Light (MIL) to turn on.

 ***IMPORTANT: Autel accepts no responsibility for any accident or injury arising from servicing the ABS system. When interpreting DTCs retrieved from the vehicle, always follow the manufacturer’s recommendation for repair.***

 ***NOTE: All software screens shown in this manual are examples, actual test screens may vary for each vehicle being tested. Observe the menu titles and onscreen instructions to make correct option selections.***

Please follow these steps to start the ABS diagnostic testing procedure:

- 1) Turn the ignition off.
- 2) Locate the vehicle’s 16-pin Data Link Connector (DLC).
- 3) Plug the scan tool cable connector into the vehicle’s DLC.
- 4) Turn the ignition on but do not start the engine.

- 5) Turn on the scan tool and wait for the **Main Screen** to appear.
- 6) Select **ABS** in the **Main Screen**. (Figure 3.1)

4.1 Vehicle Selection

There are three ways for users to enter the vehicle information in the scan tool.

A. Select vehicle step by step

In this mode, the scan tool will communicate with the vehicle and a series of vehicle identification screens appears for user to identify the vehicle. On each screen that appears, use the **UP/DOWN** scroll button to select the correct option and then press the **OK** button. Do this until the vehicle is completely identified. (Taking **Fiat** as an example)

Figure 4.1

B. Manual vehicle entry

This mode allows users to input and save specific vehicle information (i.e. PCM Part Number, Vehicle Calibration Number, Tear Tag, and VIN) manually. This function enables direct access to the vehicle's ABS system and makes the diagnostic testing more convenient, saving time doing step-by-step entry selections. (Taking **Ford** as an example)

- 1) Select the **Ford** logo from the car make screen. (Figure 4.2)

Figure 4.2

- 2) Use the **UP/DOWN** scroll button to select the **Manual Vehicle Entry** option from the **DAS** menu.

Figure 4.3

- 3) To enable the scan tool to identify the vehicle specifications,

select one of the three entries in the option screen - **PCM Part Number**, **Calibration Number** or **Tear Tag** - to fill up the vehicle information.

Figure 4.4

- 4) Taking the **PCM Part Number** entry for example, you will need to fill up the accurate vehicle information in the input entry.

Figure 4.5

[**Finish**] : After entering a new value, use this key to save the value to the tool.

[**Edit**] : Press this key to pop up a soft keyboard to facilitate your input. (Figure 4.6)

[**Esc**] : Press this key to exit.

Figure 4.6

The three keyboard function keys work as below.

[**Finish**]: When you finished the input, select this key to confirm your input and exit.

[**Pre.**]: Moves a space to the left.

[**Backspace**]: Uses this key to erase the previous digit or character when typing.

NOTE: *The data you input must be in the reasonable range. If you enter a data out of range, the tool will display a warning message “Input over flow!”*

- 5) A screen message with the vehicle information will come up, asking for your confirmation. If the information is correct select **Yes** to continue, otherwise select **No** to exit.

Figure 4.7

C. Auto vehicle entry

Some vehicles provide an auto scan feature, which allows user to skip time-wasting step-by-step vehicle identification procedure and retrieve the specific vehicle information from vehicle computer directly.

NOTE: *This function may not be available for all vehicles.*

Take **Ford** as an example.

- 1) Select the **Ford** logo from the vehicle make screen.

Figure 4.8

- 2) Use the **UP/DOWN** scroll button to select the **Start New Session** from the menu.
- 3) A screen message with the vehicle information will come up, asking for your confirmation. If the information is correct select **Yes** to continue, otherwise select **No** to exit.

Figure 4.9

4.2 Reading ABS Codes

This function allows user to read the ABS DTCs from vehicle ECU.

- 1) Follow **4.1 Vehicle Selection** procedure to enter the vehicle information. The scan tool displays a function menu (Figure 4.10).(Taking **Fiat** as an example)

Figure 4.10

- 2) Use the **UP/DOWN** scroll button to select **Read Codes** from **Function Menu** and press the **OK** button.
- 3) View DTCs and their definitions on screen.

Figure 4.11

- 4) Select **Save** option to store the codes or press **Esc** button to exit without saving.

4.3 Erasing ABS Code

This function allows user to erase the ABS DTCs in vehicle ECU.

 **NOTE:** *If you plan to take the vehicle to a Service Center for repair, DO NOT erase the ABS DTCs from the vehicle's computer. If the codes are erased, valuable information that might help the technician troubleshoot the problem will be erased.*

- 1) Follow **4.1 Vehicle Selection** procedure to enter the vehicle information. The scan tool displays a function menu (Figure 4.10).(Taking **Fiat** as an example)
- 2) Use the **UP/DOWN** scroll button to select **Erase Codes** from **Function Menu** and press the **OK** button.
- 3) A warning message will come up asking your confirmation.

Figure 4.12

- 4) Select **Yes** to confirm and **No** to exit. When the command is sent, the tool will display a message.

Figure 4.13

- 5) To make sure the codes are erased completely, perform **Read Codes** function to verify.

4.4 ECU Information

This function allows user to read the vehicle ECU information.

- 1) Follow **4.1 Vehicle Selection** procedure to enter the vehicle information. The scan tool displays a function menu (Figure 4.10). (Taking **Fiat** as an example)
- 2) Use the **UP/DOWN** scroll button to select **Ecu Information** from **Function Menu** and press the **OK** button.

- 3) View retrieved vehicle information on screen.

ECU Information	
FIAT drawing number	824676747
SW revision	15
SW version	02
Production week	46
Production year	25
ISO code	AE86839723
Save	Esc

Figure 4.14

- 4) Select **Save** option to store the codes or press **Esc** button to exit without saving.
- If the vehicle does not support ABS communication, an advisory message will show. Follow the onscreen instructions to exit the system.

5. OBDII Diagnosis

The OBD II Diagnostics function is a fast-access option that allows you to carry out a quick test on the engine system of OBD II vehicles.

When more than one vehicle control module is detected by the scan tool, you will be prompted to select the module where the data may be retrieved. The most often to be selected are the Power-train Control Module [PCM] and Transmission Control Module [TCM].

⚠ CAUTION: Don't connect or disconnect any test equipment with ignition on or engine running.

- 1) Turn the ignition off.
 - 2) Locate the vehicle's 16-pin Data Link Connector (DLC).
 - 3) Plug the scan tool cable connector into the vehicle's DLC.
 - 4) Turn the ignition on. Engine can be off or running.
 - 5) Turn on the scan tool. Select **OBDII** on **Main Screen**. (Figure 3.1)
 - 6) Press the **OK** button to wait for the Menu to appear. A sequence of messages displaying the OBDII protocols will be observed on the display until the vehicle protocol is detected.
- ***If the scan tool fails to communicate with the vehicle's ECU more than three times, a "LINKING ERROR!" message shows up on the display. In this case you need to do the followings to check up:***
 - ✓ Verify whether or not the ignition is ON.
 - ✓ Check if the scan tool's OBD II connector is securely connected to the vehicle's DLC.
 - ✓ Verify if the vehicle is OBDII compliant.

- ✓ Turn the ignition off and wait for about 10 seconds. Turn the ignition back to on and repeat the procedure from step 5.
 - ***If the “LINKING ERROR” message does not go away, then there might be problems for the scan tool to communicate with the vehicle. Contact your local distributor or the manufacturer’s customer service department for assistance.***
- 7) View a summary of **System Status** (MIL status, DTC counts, and Monitor status) onscreen. (Figure 5.1) Press the **ESC** button and the **Diagnostic Menu** (Figure 5.3) will come up.

System Status	
MIL Status	OFF
Codes Found	0
Monitors N/A	8
Monitors OK	2
Monitors INC	0
Save	OK

Figure 5.1

- If more than one module is detected, you will be prompted to select a module before testing.

Control Module
Module \$10
Module \$A4

Figure 5.2

- Use the **UP/DOWN** scroll button to select a module and press the **OK** button.

5.1 Read Codes

- Reading Codes can be done with the key on engine off (KOEO) or with the key on engine running (KOER).
 - Stored Codes are also known as “hard codes”, which are fault codes, or trouble codes that have been stored in the vehicle computer memory because the faults have reoccurred for more than a specified amount of key-cycles. These codes will cause the control module to illuminate the malfunction indicator light (MIL) when emission-related fault occurs.
 - Pending Codes are also referred to as “maturing codes” or “continuous monitor codes”. They indicate problems that the control module has detected during the current or last driving cycle but are not considered serious yet. Pending Codes will not turn on the MIL. If the fault does not occur within a certain number of warm-up cycles, the code clears from the memory.
 - Permanent Codes are DTCs that are "confirmed" and are retained in the non-volatile memory of the computer until the appropriate monitor for each DTC has determined that the malfunction is no longer present and is not commanding the MIL on. Permanent DTC shall be stored in the non-volatile memory and may not be erased by any diagnostic services or by disconnecting power to the ECU.
- 1) Use the **UP/DOWN** scroll button to select **Read Codes** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)

Figure 5.3

- 2) Use the **UP/DOWN** scroll button to select **Stored Codes**, **Pending Codes** or **Permanent Codes** from the **Read Codes** menu and press the **OK** button. (Figure 5.4)

Figure 5.4

- If there is not any Diagnostic Trouble Code, the display indicates “**No (pending) codes are stored in the module!**” Wait a few seconds or press any key to return to the previous screen.

 **NOTE:** *Permanent Codes function is available for merely vehicles supporting the CAN protocols.*

- 3) View DTCs and their definitions on screen.
- 4) If more than one DTC is found, use the **UP/DOWN** scroll button to check all the codes.

- If the retrieved DTCs contain any manufacturer specific or enhanced codes, a “**Manufacturer specific codes are found! Press any key to select vehicle make!**” message comes up prompting you to select the vehicle manufacturer to view the DTC definitions. Use the **UP/DOWN** scroll button to select the manufacturer and then press the **OK** button to confirm.

Figure 5.5

- If the manufacturer of your vehicle is not listed, use the **UP/DOWN** scroll button to select **Other** and press the **OK** button.

5.2 Erase Codes

IMPORTANT: Erasing the Diagnostic Trouble Codes may allow the scan tool to delete not only the codes from the vehicle’s on-board computer, but also “Freeze Frame” data and manufacturer specific enhanced data. Further, the I/M Readiness Monitor Status for all vehicle monitors is reset to Not Ready or Not Complete status. Do not erase the codes before the system has been checked completely by a technician.

Erasing codes does not mean that trouble codes in the ECU have been eliminated completely. As long as there is fault with the vehicle, the trouble codes will keep on presenting.

- ☑ ***NOTE: This function is performed with key on engine off (KOEO). Do not start the engine.***

- 1) Use the **UP/DOWN** scroll buttons to select **Erase Codes** from **Diagnostics Menu** and press the **OK** button. (Figure 5.3)
- 2) A warning message comes up asking for your confirmation. (Figure 5.6)

Figure 5.6

- If you do not want to proceed with erasing codes, press the **Esc** button or select **NO** to exit and return to the previous screen.
- 3) Press the **OK** button to confirm.
- If the codes are cleared successfully, an “Erase Done!” message shows on the display.

Figure 5.7

- If the codes are not cleared, then an “**Erase Failure. Turn Key on with Engine off!**” message appears. (Figure 5.8)

Figure 5.8

- 4) Press any button to return to **Diagnostic Menu**.

5.3 Live Data

In this function, you can not only read the live data but also record data for later reviews.

Viewing Data

The View Data function allows viewing of live or real time PID data of vehicle's computer module(s).

- 1) To view live data, use the **UP/DOWN** scroll button to select **Live Data** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
- 2) Wait a few seconds while the scan tool validates the PID MAP.

Figure 5.9

A. Viewing Complete List

- 1) To view a complete set of data, use the **UP/DOWN** scroll button to select **Complete List** from **Live Data** menu and press the **OK** button.

Figure 5.10

- 2) To view the live PIDs onscreen, use the **UP/DOWN** scroll button for all PIDs to display if additional information is available on more than one page.

Complete List		
Long Term Fuel Trim- Bank 1	12.5	%
Long Term Fuel Trim- Bank 3	9.4	%
Short Term Fuel Trim	7.8	%

At the bottom of the table is a dark navigation bar with three buttons: "Pause", "One Graphic", and "Save". The "One Graphic" button is highlighted.

Figure 5.11

- If the “**One Graphic**” at the bottom appears when a PID is highlighted, graphic information is available. Select **One Graphic** to view the graph. (Figure 5.12). The PID name, current value, maximum and minimum values are displayed on the screen.

Figure 5.12

- Select **Two Graphics** to display two graphs on the same screen. (Figure. 5.13)
- If the “**Merge Graph**” at the bottom appears, merged graph information is available. (Figure 5.13)

NOTE: *Merge Graph* can be used to compare two related parameters in graphic mode, which is especially convenient in the **Custom List** option where you could select two interacted parameter to merge and see their relationship.

Figure 5.13

- Select **Text** to return to the text viewing mode of PID data.
- Select **Save** to record the retrieved live data and PID graphs.

- Select **Pause** to suspend viewing. You could resume the viewing process again by selecting **Start**.
- 3) Press the **ESC** button to return to the previous menu.

B. Viewing Custom List

- 1) To view customized PID data, use the **UP/DOWN** scroll button to select **Custom List** from **Live Data** menu and press the **OK** button.(Figure 5.10)
- 2) Use the **UP/DOWN** scroll button to move up and down to the desired items and click **Select** button to confirm. The selected parameters are marked with solid squares.

Custom List		
<input checked="" type="checkbox"/>	Numbers of DTCs	1
<input checked="" type="checkbox"/>	DTC that caused required freeze frame data storage	2
<input type="checkbox"/>	Fuel System 1status	
<input type="checkbox"/>	Fuel System 2 status	
<input type="checkbox"/>	Calculated Load Value	
<input type="checkbox"/>	Engine Coolant Temperature	
Select All Clear Clear All		

Figure 5.14

- The number to the right of the selected item indicates the sequence of this item.
 - If you want to deselect the item, press Clear button.
 - To select all the items on the screen, press **Select All** button. To clear all the selected items on the screen, press **Clear All** button.
- 3) Press the **OK** button to view the selected PIDs.

Custom List		
Calculated Load Value	9.0	%
Engine Coolant Temperature	145	°F
Pause	One Graphic	Save

Figure 5.15

- 4) Press the **ESC** button to return to the previous menu.

Recording Data

The Record Data function allows recording vehicle modules' Parameter Identification data (PID) to help diagnosing intermittent vehicle problems. You could save data files to the SD card and then use the Playback function to view the saved files.

NOTE: *The length of time for each frame varies per vehicle. Generally, one frame of data is about 1/4 second, or 4 frames per second.*

- 1) To record live data with the live data screen displaying, select **Save** at the bottom. The scan tool will start timing to record the retrieved live data and PID graphs.
- If you record live data under text mode, the following screen shows:

Complete List		
Long Term Fuel Trim- Bank 1	12.5	%
Long Term Fuel Trim- Bank 3	9.4	%
Short Term Fuel Trim	7.8	%
Pause One Graphic Saving 70		

Figure 5.16

- If you record live data under graph mode, following screen shows:

Figure 5.17

☑ **NOTE:** *The scan tool can only playback text data even though the data is saved in graphic mode.*

- 2) When there is not enough memory space, a warning message will prompt to ask users to clean up.

Figure 5.18

- 3) Select **OK** to return to the previous menu.
- 4) Select **Pause** to suspend recording. You could resume the recording process again by selecting **Start**.
- 5) Press the **ESC** button to exit.

📌 **NOTE:** *You can review the saved data in Playback function.*

5.4 Freeze Frame

Freeze Frame Data allows the technician to view the vehicle's operating parameters at the moment a **DTC (Diagnostic Trouble Code)** is detected. For example, the parameters may include engine speed (**RPM**), engine coolant temperature (**ECT**), or vehicle speed sensor (**VSS**) etc. This information will aid the technician by allowing the parameters to be duplicated for diagnostic and repair purposes.

- 1) To view freeze frame data, use the **UP/DOWN** scroll button to select **Freeze Frame** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
- 2) Wait a few seconds while the scan tool validates the PID MAP.

- 3) If the retrieved information covers more than one screen, use the **DOWN** scroll button as necessary, until all the data have shown up.

Freeze Frame		
Numbers of DTCs	5	
DTC that caused required freeze frame data storage	P0100	
Fuel System 1 status	OL	
Fuel System 2 status	OL	
Calculated Load Value	100	%
Save		

Figure 5.19

- If there is no available freeze frame data, a notice “**No freeze frame data stored!**” shows on the display.
- 4) Select **Save** to record freeze frame. A confirming message “**Save success!**” will show on the display and return to the previous menu.
 - 5) If you don’t want to save the freeze frame data, press the **ESC** button to return.

5.5 Retrieving I/M Readiness Status

I/M Readiness function is used to check the operations of the Emission System on OBD2 compliant vehicles. It is an excellent function to use prior to having a vehicle inspected for compliance to a state emissions program.

- ☒ **CAUTION:** *By clearing the trouble codes you also clear the readiness status for the individual emission system readiness tests. In order to reset these monitors, the vehicle must be driven through a complete drive cycle with no trouble codes in memory. Times for reset vary depending on the vehicle being serviced.*

Some latest vehicle models may support two types of **I/M Readiness** tests:

- A. **Since DTCs Cleared** - indicates status of the monitors since the DTCs are erased.
- B. **This Drive Cycle** - indicates status of monitors since the beginning of the current drive cycle.

An I/M Readiness Status result of “NO” does not necessarily indicate that the vehicle being tested will fail the state I/M inspection. For some states, one or more such monitors may be allowed to be “Not Ready” to pass the emissions inspection.

- **“OK”** -- Indicates that a particular monitor being checked has completed its diagnostic testing.
 - **“INC”** -- Indicates that a particular monitor being checked has not completed its diagnostic testing.
 - **“N/A”** – Indicates the monitor is not supported on that vehicle.
- 1) Use the **UP/DOWN** scroll button to select **I/M Readiness** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
 - 2) Wait a few seconds while the scan tool validates the PID MAP.
 - 3) If the vehicle supports both types of tests, then both types will be shown on the screen for selection.

Figure 5.20

- 4) Use the **UP/DOWN** scroll button, as necessary, to view the status of the MIL light (“**ON**” or “**OFF**”) and the following monitors:
- **Malfunction Indicator Lamp Status**
 - **Misfire Monitor**
 - **Fuel System Monitor**
 - **Comprehensive Component Monitor**
 - **Catalyst Monitor**
 - **Heated Catalyst Monitor**
 - **Evaporative System Monitor**
 - **Secondary Air system Monitor**
 - **Oxygen Sensor Monitor**
 - **Oxygen Sensor Heater Monitor**
 - **EGR System Monitor**

Since DTCs cleared		
Malfunction Indicator Lamp(MIL) Status	OFF	
Misfire Monitoring	OK	
Fuel system Monitoring	OK	
Comprehensive component Monitoring	OK	
Catalyst Monitoring	INC	

Figure 5.21

- 5) If the vehicle supports readiness test of “**This Drive Cycle**”, a screen of the following displays: (Figure 5.22)

This Drive Cycle		
Malfunction Indicator Lamp(MIL) Status	OFF	
Misfire Monitoring	OK	
Fuel system Monitoring	OK	
Comprehensive component Monitoring	OK	
Catalyst Monitoring	INC	

Figure 5.22

- 6) Use the **UP/DOWN** scroll button for more PIDs if additional information is available on more than one page. Or use the **LEFT/RIGHT** scroll button to view PIDs in the previous/next page.
- 7) Press the **ESC** button to return to **Diagnostic Menu**.

5.6 O2 Monitor Test

OBDII regulations set by SAE require that relevant vehicles monitor and tests on the oxygen (O2) sensors to identify problems related to fuel efficiency and vehicle emissions. These tests are not on-demand tests and they are done automatically when engine operating conditions are within specified limits. These test results are saved in the on-board computer's memory.

The O2 Monitor Test function allows retrieval and viewing of O2 sensor monitor test results for the most recently performed tests from the vehicle's on-board computer.

The O2 Monitor Test function is not supported by vehicles which communicate using a controller area network (CAN). For O2 Monitor Test results of CAN-equipped vehicles, see 5.7 On-Board Monitor Test.

- 1) Use the **UP/DOWN** scroll button to select **O2 Monitor Test** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)

- 2) Wait a few seconds while the scan tool validates the PID MAP.
- 3) Use the **UP/DOWN** scroll button to select O2 sensor from **O2 Monitor Test** menu and the press **OK** button.

Figure 5.23

- If the vehicle does not support the mode, an advisory message will be displayed on the screen.

Figure 5.24

- 4) View test results of the selected O2 sensor. (Figure 5.25)

O2 Bank1 Sensor1	
1	Rich-Lean Threshd(V)
2	Lean-Rich Threshd(V)
3	Low for Switch(V)
4	High for Switch(V)
5	Rich-Lean Threshd(s)
6	Lean-Rich Threshd(s)
7	Min for test Cyc(V)
8	Max for test Cyc(V)

Figure 5.25

- 5) Use the **UP/DOWN** scroll button to view more data if additional information is available in more than one page.
- 6) Press the **ESC** button to return to the previous menu.

5.7 On-Board Monitor Test

The **On-Board Monitor Test** is useful after servicing or after erasing a vehicle's control module memory. The **On-Board Monitor Test** for non-CAN-equipped vehicles retrieves and displays test results for emission-related power train components and systems that are not continuously monitored.

The **On-Board Monitor Test** for CAN-equipped vehicles retrieves and displays test results for emission-related power train components and systems that are and are not continuously monitored. Test and components IDs are determined by the vehicle manufacturer.

In this test, there are typically a minimum value, a maximum value, and a current value for each monitor. By comparing the current value with the minimum and maximum value, the scan tool will determine if it is OK.

- 1) Use the **UP/DOWN** scroll button to select **On-Board Monitor Test** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)

- 2) Wait a few seconds while the scan tool validates the PID MAP.
- 3) The scan tool will prompt you to select the vehicle make. (If you have selected the vehicle before, the **Vehicle Manufacturer** screen would not appear again.)

Figure 5.26

- 4) After selecting the vehicle manufacturer, the scan tool shows the On-Board Monitors tests for the specific monitoring systems.
- 5) On **On-Board Monitor Test** menu, use the **UP/DOWN** scroll button to select a test to view and press the **OK** button.

Figure 5.27

- If the vehicle under test does not support the mode, an advisory message will be displayed on the screen. (Figure 5.28)

Figure 5.28

- For CAN-equipped vehicles, test selections can be as below:

Figure 5.29

- 6) Use the **UP/DOWN** scroll button to select the desired monitor from **On-Board Monitor Test** menu and press the **OK** button.
- 7) View test data on screen.

Test \$01 Data		
ID	\$01	
Module	\$10	
Test Value	1020	
Min Limit	3040	
Max Limit	3040	

Next ID Pre ID

Figure 5.30

- For CAN-equipped vehicles, test results displayed can be as below:

Rich to Lean Sensor Threshold Voltage		
Test Value	0.5252	V
Min Limit	0.5252	V
Max Limit	0.5252	V
Status	OK	

Figure 5.31

- 8) Press the **ESC** button to return to the previous menus.

5.8 Component Test

The Component Test function allows initiating a leak test for the vehicle's EVAP system. The scan tool itself does not perform the leak test, but commands the vehicle's on-board computer to start the test. Different vehicle manufacturers might have different criteria and methods for stopping the test once it has been started. Before starting the Component Test refer to the vehicle service manual for instructions to stop the test.

- 1) Use the **UP/DOWN** scroll button to select **Component Test** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
- 2) Wait for the scan tool to display the **Component Test** menu.

Figure 5.32

- 3) If the test has been initiated by the vehicle, a confirmation message will be displayed on the screen.

Figure 5.33

- Some vehicles do not allow scan tools to control vehicle systems or components. If the vehicle under test does not support the EVAP Leak Test, an advisory message is displayed on the screen.

Figure 5.34

- 4) Wait a few seconds or press any key to return to the previous screen.

5.9 Viewing Vehicle Information

The **Vehicle Information** function enables retrieval of **Vehicle Identification No. (VIN)**, **Calibration ID Nos. (CINs)**, **Calibration Verification Nos. (CVNs)** and **In-use Performance Tracking on 2000 and newer vehicles that support Mode 9**.

- 1) Use the **UP/DOWN** scroll button to select **Vehicle Info** on the **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
- 2) An advisory message will show to remind you to turn key on with engine off. Wait a few seconds or press any key to continue.

Figure 5.35

- 3) Wait for the scan tool to display the **Vehicle Info** menu.

Figure 5.36

- If the vehicle does not support this mode, a message shows on the display warning that the mode is not supported.
- 4) From **Vehicle Info** menu, use the **UP/DOWN** scroll button to select an available item to view and press the **OK** button.
 - 5) View the retrieved vehicle information.

Vehicle ID Number	
VIN	123456789ABCD EFG
Save	Esc

Figure 5.37

- 6) Press the **ESC** button to return the previous menu

5.10 Modules Present

The Modules Present function allows viewing of the module IDs and communication protocols for OBDII modules in the vehicle.

- 1) Use the **UP/DOWN** scroll button to select **Modules Present** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
- 2) View modules present with their IDs and communication protocols.

Modules Present	
Protocol	ID
SAE J1850 PWM	\$10
Save	

Figure 5.38

- 3) Select **Save** to save the modules data and return to the previous menu, or press the **ESC** button to exit.

5.11 DTC Lookup

The **DTC Lookup** function allows user to search definitions of the DTCs stored in the built-in DTC library.

- 1) Use the **UP/DOWN** scroll button to select **DTC Lookup** from **Diagnostic Menu** and press the **OK** button. (Figure 5.3)
- 2) Wait for the scan tool to display the **DTC Lookup** screen.

DTC Lookup		
<input style="width: 100%; height: 20px;" type="text"/>		
<p>Only PCBU can be the first letter to be put in. Only 0~9,a~f for the rest letters.</p>		
Finish	Show	Esc

Figure 5.39

- 3) Select **Show** and a soft keyboard will pop up. Use the **LEFT/RIGHT** button and **UP/DOWN** button to move to the desired character, and then press the **OK** button to confirm the

input. Select '**Backspace**' to erase the previous digit or character, and/or '**Pre.**' to move a space to the left for editing.

Figure 5.40

- 4) After entering the DTC code, select **Finish** and a message will show to ask for your confirmation to save the DTC item.

Figure 5.41

- 5) Press **Yes** or the **OK** button to proceed. The scan tool will display the designated DTC's definition.

Figure 5.42

- Use the **LEFT/RIGHT** scroll button to view the previous/next DTC.
 - Select **Save** to record the code's definition.
 - For manufacturer specific codes, you need to select a vehicle make on an additional screen to look for DTC definitions.
 - If definition could not be found (SAE or Manufacturer Specific), the scan tool displays "**Please refer to vehicle service manual!**"
- 6) Press **No** or the **ESC** button to return to the previous menu.

6. Playback

The **Playback Data** function allows reviews for data recorded by the scan tool from vehicle tests.

6.1 Data Viewing

- 1) Use the **LEFT/RIGHT** scroll button to select **Playback** from **Main Screen** (Figure 3.1), and press the **OK** button. Wait for the **Review Data** menu to appear.

Figure 6.1

- 2) To review data saved in the OBDII diagnosis function, select **OBDII** from the menu. To review data saved in the ABS diagnosis function, select **ABS** from the menu, and then press the **OK** button to continue.

Figure 6.2

- 3) Use the **UP/DOWN** scroll button to select the desired item for detailed information from the **OBDII** menu or the **ABS** menu, and press the **OK** button to continue.

ECU Identification	
ECU Part Number	3234353639
Print	

Figure 6.3

- 4) Select **Print** to upload the recorded data to your computer for printing, or press the ESC button to exit.

☒ ***NOTE:** For operation details of data printing, see 7.1 Print Data.*

6.2 Data Deleting

By selecting **Delete** on the data screen users can erase the selected data on the scan tool. Review the recordings thoroughly before erasing. Users can also erase all recordings by select **Delete All**. (Figure 6.2),

☒ ***NOTE:** Don't use Delete All unless you are definitely sure what you are going to proceed.*

7. Print and Update

7.1. Print Data

The **Print Data** function allows printing out diagnostic data recorded by the scan tool or customized test reports by connecting the scan tool to a PC or laptop with the USB cable supplied.

To print out the retrieved data, you need the followings:

- ✓ AL609 scan tool
 - ✓ A PC or laptop with USB ports
 - ✓ A USB cable
- 1) Install the **PC Suite** through the included CD, or download the applications in our website: www.maxidas.com or our distributors' site.
 - 2) Connect the scanner to the PC with the USB cable supplied.
 - 3) Run **Printer** software on the PC.
 - 4) Select **Playback** function in **Main Screen** of the scan tool. Select **OBDII** or **ABS** from the menu, use the **UP/DOWN** scroll button to select the data item you want to print.
 - 5) Wait for the reviewing window to display (Figure 6.3), and then select **Print** function at the bottom. The selected file will be uploaded to your computer. For more detailed instructions, please refer to **6. Playback**.
 - 6) The **Printer** program interface will show as below.

Figure 7.1

7) The selected data will display on the textbox of **Printer**. By selecting the function keys on the right, you could execute the following operations:

- **Print** – Print all data in the textbox with the printer connected to the PC.
- **Edit** – Once clicked, the software will automatically open a NOTEPAD window with all recorded data for editing.
- **Copy** – Copy all data in the textbox to the clipboard.
- **Clear** – Delete all data in the textbox.
- **Exit** – Quit the operation.

 **NOTE:** *The scan tool can only print text data even though the data is saved in graphic mode.*

7.2. Software update

This function allows you to update the scan tool software through the PC.

◆ Register the Tool

User could update the scan tool **ONLY** after you had registered the

tool on our website: www.maxidas.com. Then you could download software, update online, retrieve information and get warranty service.

NOTE: *Prior to registration, please confirm your network is working properly.*

1. Visit our website www.maxidas.com.
2. Click on the **Update** tool bar at the top of the screen, and then select **User Register**, or click on the **Updates** column in the lower right corner of the screen, and select **Register**.
3. The screen of Register Information appears. Please read through the instructions, and click on **Agree** to continue.
4. Put in the Product Serial No. and Register Password, and click on **Next**.
5. Follow the instructions onscreen to finish the registration.

NOTE: *Please use the Abut function to find out the Product Serial No. and Register Password. For details, please refer to 3.6 System Setup.*

Figure 7.2

◆ Update Procedure

Autel frequently releases software updates that you can download. The Update feature makes it very easy to determine and get exactly what you need.

- 1) Install the **PC Suite** through the included CD, or download the applications in our website: www.maxdas.com or our distributors' site.
- 2) Make sure that your PC is connected to the Internet.
- 3) Remove the TF card from the scan tool.
- 4) Connect the TF card to the PC with a card reader.
- 5) Run the Update client in the **PC Suite** software. Wait for the Log In window to pop up.

Figure 7.3

- 6) Put in the user name and password and wait for the Update window to display. If you forget your password unintentionally, you may always click the [**Forget your password?**] to link to our website and find your password back.
- 7) In the Update window, select the items you want to install. Usually, you should install all available updates.

Figure 7.4

Generally, there are two ways to update programs:

Batch updating

- Select the programs that you would update by clicking on the check boxes next to those items. Then click the **Update Selected Items** button on the right side of screen.
- Or click on the Select All checkbox on the right side of screen and all updatable items will be selected automatically. Then click the **Update Selected Items** button on the right side of screen.
- Check the updating process by observing the upper left progress bar [downloading] and upper right progress bar [installing]. You may also find progress information in the Status column of updated items.
- When the downloading is completed, the downloaded programs will be installed automatically. The new version will replace the old version.
- Anytime you could click the **Pause** button on the right side of screen to suspend all progresses, and the state of those suspended items would change to STOPPED.
- To resume updating process, you may need to select those suspended items again, and then click the **Update Selected Items** button. The progress will resume from the break point.

Single updating

- Find out the desired updating item and click the **INSTALL** button in the same line, and the **INSTALL** button changes to **STOP** at the same time.
 - Check the updating process by observing the upper left progress bar [downloading] and upper right progress bar [installing]. You may also find progress information in the Status column of updated items.
 - Anytime you could click the **Pause** button in the line to suspend this progress, and the state of this item would change to **STOPPED**.
 - To resume updating process, click the **INSTALL** button in the line again. The progress will resume from the break point.
 - When the downloading is completed, the downloaded program will be installed automatically. The new version will replace the old one.
- 8) Insert the TF card into the scan tool, and restart the scan tool to finish the whole update.

◆ **View or Delete Programs**

To view the list of installed programs or to delete an installed program, please follow these steps:

- Click on the Installed Programs tag entry and the page will show the list of programs installed.
- Select the program(s) that you would delete.
 - **Batch delete:** Select the programs that you would delete by clicking on the check boxes to the left of those items. Then click the **DELETE** button on the right side of screen.
 - **Single delete:** Click the **UNINSTALL** button in the line of your would-be-deleted program.
- A window asking “**Are you sure to delete the software?**” will pop up for your confirmation.

Figure 7.5

- Click on **Yes** to delete the program(s) selected, or on **No** to cancel the action.
- The deleted program will automatically add to the end of program list in the UPDATE page in case you would like to install again.

Theoretically, all programs of the latest versions will be automatically compatible with the older versions, but if your scan tool does have a compatibility problem and need to retrieve the older version for some programs, please delete the new versions first then install the older version again. Choose the older version from the pull-down menu of program version.

8. Warranty and Service

8.1. Limited One Year Warranty

Autel warrants to its customers that this product will be free from all defects in materials and workmanship for a period of one (1) year from the date of the original purchase, subject to the following terms and conditions:

- 1) The sole responsibility of Autel under the Warranty is limited to either the repair or, at the option of Autel, replacement of the scan tool at no charge with Proof of Purchase. The sales receipt may be used for this purpose.
- 2) This warranty does not apply to damage due directly or indirectly, to misuse, abuse, negligence or accidents, repairs or alterations outside our Service Center or facilities, criminal activity, improper installation, normal wear and tear, or to lack of maintenance.
- 3) Autel shall not be liable for any incidental or consequential damages arising from the use, misuse, or mounting of the scan tool. Some states do not allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you.
- 4) All information in this manual is based on the latest information available at the time of publication and no warranty can be made for its accuracy or completeness. Autel reserves the right to make changes at any time without notice.

8.2. Service Procedures

If you have any questions, please contact your local store, distributor or visit our website at www.auteltech.com.

If it becomes necessary to return the tool for repair, contact your local distributor for more information.
